

WE CLAIM:

1. A children's water toy comprising:

a base unit for directing flow of a fluid in a substantially vertical direction; and

a spraying unit configured to receive fluid from the base member and rebound the

5 fluid to direct it out of the bottom of the spraying unit so that the spraying unit is

maintained aloft by fluid pressure.

2. The children's water toy claim 1 wherein the base portion further comprises a
stake portion, collar portion, elbow portion and nozzle portion.

3. The children's water toy of claim 2 wherein the elbow portion is configured to
10 connect to a hose and to the nozzle portion.

4. The children's water toy of claim 1 wherein the spraying unit further comprises a
hoop portion, fluid-deflecting portion and one or more arcuate transverse portions.

5. The children's water toy of claim 4 wherein the hoop portion further comprises
curved members, two-way connectors and three-way connectors.

15 6. The children's water toy of claim 4 wherein the fluid-deflecting portion is a cone.
